

THE DIFFERENCE ZEROSPAM

Zerospam is the 100% cloud solution that offers superior protection against spam and email-borne cyberattacks such as ransomware, viruses, Phishing, and Spear Phishing. Zerospam is an affordable solution for any business, highly efficient against the dangers of cyberspace, and requires no additional devices.

SUPERIOR RANSOMWARE DETECTION

Zerospam scans for the top 3 ransomware propagation vectors: hidden executable files, infected macros in documents from old versions of Microsoft Office, and dangerous links.

PROVEN ACCURACY

Since 2012, Zerospam has been periodically evaluated by the VBSpam program. Over this time, our solution has achieved detection rates above 99.9% consistently, and false positives have been negligible. On six occasions, we have received the prestigious VBSpam+ award, reserved for solutions with a minimum detection rate of 99.95% and 0 false positives.

SUPERIOR SPEAR PHISHING DETECTION

To detect and stop fraud attempts through email, Zerospam's specialized algorithms compare factors such as the origin of each message, the validation of domains, the Levenshtein distance between domains (TO / FROM), and the presence of text related to money transfers.

ZEROSPAM RELIABILITY

Use Transport Layer Security (TLS) to protect emails in transit. TLS can also be applied to messages sent to your key business partners. The Zerospam filtration process occurs at the speed of light, and no information is stored, except for communication logs and quarantined messages.

ASSURED COMPATIBILITY

Zerospam is compatible with the top email solutions on the market. Whether it is an on-premises mail server or a cloud email solution, Zerospam will be your best ally. Zerospam is 100% compatible with Microsoft 365, Office 365, Microsoft Exchange, GSuite, cPanel, PostFix, among others.

PROTECTED EVERYWHERE

Studies show that most vulnerabilities are not related to technology but human error. Allowing any user to access the quarantine is not secure; for this reason, the Zerospam quarantine is centralized; however, the customer can change that parameter at any time.

FEEDBACK SYSTEM AND FILTRATION RULES ALWAYS UPDATED

Zerospam users have the option of installing a plug-in to the email client that allows one-click reporting of unwanted messages (spam) that may have circumvented the filtering process. The feedback from Zerospam's huge customer base enables us to update our filtering rules regularly, so our customers are always protected at the highest level.

EASY TO MANAGE FROM START TO END

Zerospam is a once-and-done cloud solution made to be configured and forgotten. Our customers love to know that their emails are always protected without the need for major administration efforts. From the layout of our platform to our declarative license, everything has been designed to make your life easier.

SHORT AND MANAGEABLE QUARANTINES

Zerospam quarantines allow for quick and easy administration. Our solution has multiple filters that facilitate email searches, as well as icons that allow you to see why a message was quarantined. Zerospam evaluates emails giving them a score that reflects the level of risk they represent, according to the filters applied.

EXPERT TECHNICAL SUPPORT

Zerospam's technical support experts have years of experience and master SMTP as a second language. They are trained to deliver complete answers competently and quickly to all email-related questions. We work with synergies, and we are always attentive to the needs of our clients.

INTEGRATED REDUNDANCY

With 3 data centers, Zerospam provides a reliable service 24/7. Our data centers are hosted in different parts of the world; thus, should a service interruption occur in one of these centers, the other two will continue to operate, ensuring an uninterrupted flow of emails.

CONTINUITY MANAGEMENT

In the event of a failure in the client's server, Zerospam offers a free continuity service for five days. During those five days, emails will queue. If you need more time, you can request it by making a temporary account set up; that way, you'll get your emails without any problem.

READY-TO-USE SOLUTION

Zerospam comes ready with its filtration parameters ready to go from the first minute. We make it easy for you because we are the antispam experts. We block ALL spam and deliver ALL legitimate emails.

The most accurate, safe, and simple antispam cloud solution!
