Cyber Protect Cloud
 Get to know the power of integration

<https://youtu.be/2y2UwcAin5Y>

Acronis Cyber Protect Cloud is the first AI based integration, data protection and cyber protection for Resellers and Service Providers. Eliminate complexity, putting security at the center of your solutions, ensuring your protection and reducing costs.

It is the best option in cyber protection. Let us tell you why:

- **Integration:** The unified approach eliminates the complexity and gaps that can occur in the management of information security, as a result of the overlapping of different tailored solutions.
 - One vendor
 - One license
 - One agent
 - One console
 - One back-end
 - One single experience
- It is based on Artificial Intelligence (AI), allowing you to detect threats and attacks in real time, enabling smarter use of resources.

• **Built-in protection between functions:**

- **Identification:** Infrastructure and device discovery, vulnerability assessment, data protection map.
- **Protection:** Remote agent installation, backup and disaster recovery, unified protection policy management.
- **Detection:** Defenses against malware and ransomware , hard drive status control, and dashboards and reports.
- **Response:** Integrated fix management with backup, malware quarantine, rescue with bootable devices.
- **Recovery:** Backup and disaster recovery, forensic information on backup and remote desktop.

- **Because it is cloud-native,** it allows you to offer cyberprotection in an easy, efficient and secure way.

What does **Acronis Cyber Protect Cloud** integrate?

BACKUP AND RECOVERY

Fast and reliable recovery of data, applications and systems

ANTIMALWARE

Next-generation full-stack protection against malware and AI based ransomware detection

SECURITY AND MANAGEMENT

Easy to use user interface with comprehensive management

What are the functions of **Acronis Cyber Protect Cloud**?

IDENTIFY	PROTECT	DETECT	RESPOND	RECOVER
<ul style="list-style-type: none"> Discover new devices Evaluate vulnerabilities Data protection 	<ul style="list-style-type: none"> Remote Agent installation Backup and disaster recovery. Unified protection policy management. 	<ul style="list-style-type: none"> Protection against malware/ransomware Hard disk drive status control Dashboards and reports. 	<ul style="list-style-type: none"> Integrated patch management whit backup Malware quarantine. Rescue whit boot media. 	<ul style="list-style-type: none"> Backup and disaster recovery. Backup forensic information. Remote desktop.
